

SOUTH AUSTRALIA.

AGRICULTURAL

AND

LIVE STOCK STATISTICS

FOR THE YEAR ENDING

MARCH 31ST, 1865;

WITH

PREFATORY REPORT.

PRESENTED TO BOTH HOUSES OF PARLIAMENT BY HIS EXCELLENCY'S COMMAND.

ADELAIDE:

PRINTED BY AUTHORITY BY W. C. COX, GOVERNMENT PRINTER, VICTORIA-SQUARE.

1865.

REPORT

TO THE HONORABLE HENRY AYERS, M.L.C.,

CHIEF SECRETARY,

&c., &c., &c.

Chief Secretary's Office, Adelaide, 13th May, 1865.

Sir—

I have the honor to submit, for the information of His Excellency the Governor-in-Chief, my Sixth Annual Report on the Agricultural and Live Stock Statistics, being those collected for the year terminating on 31st March last, Season 1864-5.

The desire expressed in several quarters for an earlier compilation of these statistics, in order that the information obtained might be rendered of greater value both to the agricultural and mercantile communities, induced me to seek your authority for undertaking the collection of the returns six weeks earlier than had been customary on previous occasions.

Contrary to my expectations, pointed out in a former report, the difficulty of obtaining correct returns so soon after the harvest had been gathered, and, in some cases, before final operations were concluded, was not so great as anticipated—the increased zeal and attention of the collectors preventing any prejudicial effect upon the reliableness of the information collected. Feeling satisfied on that point, I was enabled to publish, on the 27th March, some six weeks sooner than last year, a return of the produce of the late wheat crop, showing the acreage and average yield for each district, in comparison with the same particulars as respects its predecessor.

The area of country and suburban land alienated from the Crown during the twelve months ended 31st December, 1864, amounted to 225,171 acres, or 65,379 acres more than in the year 1863—bringing up the total area of purchased land to 2,893,814 acres, or 19.64 acres per head of the estimated population. At the commencement of 1864 the average for each individual of the population was nineteen acres.

Two-thirds of the alienated land is returned as being in the occupation of freeholders—maintaining the proportion existing in the previous year. Twenty per cent., or one in every five acres of the purchased land is under cultivation, as was the case in 1863. It would appear, therefore, that the sale of land, large as it was, did not exceed the requirements of the agriculturist.

Notwithstanding the large purchases of land for grazing purposes, it is important to note that the ratio of cultivated to untilled land is maintained as 1 to 4; and it will be observed that the per-centage of increase in cultivation during the season under review is similar to the rate at which the land sales were augmented during the twelvemonths preceding.

In comparison with the respective populations, there is five times more land under tillage in South Australia, than in the adjoining Colonies—there being four acres for every man, woman, and child in the Province, or twelve acres for every male of fourteen years of age and upwards. Seeing that, of this division of the population, only one-sixth are engaged in agricultural pursuits, it follows that an eighty-acre section can receive but little more than the continuous labor of one statute adult throughout the year.

A considerable increase again appears in the extent of enclosed land, which now amounts to 3,499,098 acres compared with 2,900,291 acres, an addition of 598,807 acres, chiefly attributable to the further enclosure of land for pastoral purposes—the fenced pasturage amounting to 2,911,323 acres, against 2,344,324 acres in 1864—an increase of one-fourth. Very large areas in the South-eastern District are enclosed with sheep-proof fences of a most substantial kind; the aggregate enclosure in that district alone amounting to 1,730,644 acres; three-fourths of this fencing encloses runs held under lease from the Crown, the whole extent of alienated land in the district being 366,403 acres, only 16,503 acres of which are at present under cultivation. One-fourth of the sheep in the Colony are depastured within the limits of this portion of the Province.

The total area of land under cultivation amounts to 587,775 acres, against 555,968 acres in the previous season—showing 31,807 acres additional, or five and three-quarters per cent.; the increased tillage being principally found in the Northern Agricultural District, comprised in Counties Gawler, Light, and Stanley.

The favorable position in which the farmers had been placed by the abundant yield of the harvest of 1863-4, and the high prices ruling throughout the year, naturally induced them to use their utmost exertions to place as much land under wheat as possible—the result being, that whilst the increased area of land under tillage is 31,807 acres, as above stated, the additional area under wheat is 55,078 acres—the hay land and fallow being reduced proportionately. The increase amounts to sixteen per cent. as against five per cent. in the preceding season.

The acreage of the wheat crop amounted to 390,836 acres, or two-thirds of the total cultivated land. In 1863-4 there were 335,758 acres under wheat, or sixty per cent. of the tilled land; the increase this season has, therefore, amounted to six per cent. The total produce of the harvest was 4,252,949 bushels, compared with 4,691,919 bushels in the yield of the previous harvest; showing a decrease of 438,970 bushels—the average yield per acre being only eleven bushels, as against fourteen bushels, and one bushel less than the average production of the past seven seasons.

On one occasion only during that period has the harvest been less productive—namely, in the year 1859-60—when only 9 bushels 38lbs. per acre were reaped. The yield for each season, and other particulars respecting the cultivation of wheat during the septennial period just closed, is given in the following table. It will be seen that, in that short space of time, the growth of wheat has more than doubled.

Season.	Acres cultivated.	Acres under Wheat.	Produce, Wheat.	Average per Acre.
			Bushels.	B. lbs.
1858-9	264,462	188,703	2,109,544	11 11
1859-60.....	361,884	218,216	2,103,411	9 38
1860-61.....	428,816	273,672	3,576,593	13 4
1861-2	486,667	310,636	5,410,756	10 59
1862-3	494,511	320,160	3,841,824	12 0
1863-4	555,968	335,758	4,691,919	14 0
1864-5	587,775	390,836	4,252,949	11 0

There can be no doubt that the low average of the South Australian wheat crop is owing to the imperfect cultivation of a great portion of the land. Many small holders are compelled to plough and sow the same land year after year, without intermission, or any attempt to replenish the soil by fallowing or other means—resulting in a very low return, and thus reducing the average yield for the whole Colony, which is almost invariably exceeded by the better class of farmers, whose more extensive holdings enable them to pursue a systematic plan of operations, in which more careful tillage, rest for the soil, and a combination with stock-farming, are stated to be essential to and generally productive of success.

The deficiency in the yield of the late harvest was of course mainly attributable to the unusual dryness of the season; the absence of rain at the period of the wheat coming into ear being particularly referred to as the cause of the poverty of crops that, up to within a few weeks of the harvest, promised an abundant return. In some districts red rust appeared, though not to the extent prevalent last season, and few complaints are made of the presence of black rust, whilst the disease known in the hilly districts as ground

ground blight is reported to be disappearing. Every description of crop suffered severely from the want of moisture when approaching maturity; and the drought being general throughout the Province the small yield recorded is not surprising. Fortunately, the absence of rain at this critical period is quite exceptional, the Hon. G. S. Kingston's tables showing that, since the foundation of the Colony, in three cases only, viz., in 1843, 1854, and 1859, has the rainfall been as low as in the three months September, October, and November of 1864. In these months the average fall for the twenty-five years has been 5.1 inches, whilst, during the past season, only 2.8 inches fell, the quantity falling in the month of November being unprecedentedly low—only one-tenth of an inch, the average rate being one inch and three-tenths. The season of 1859-60, when the crops were poorer still, was characterized by a like deficiency of moisture during the spring months.

Seven-eighths of the wheat crop was reaped by machine, the area hand-reaped being less than last year, notwithstanding the increased cultivation. Out of 390,836 acres, 339,518 acres were gathered by the machine—being an increase of 57,021 acres secured in that manner, whilst the quantity reaped by manual labor only amounted to 51,095 acres altogether. One, if not the most important, advantage our farmers possess over those of the sister Colonies is the expedition and economy with which their crops can be secured, owing to the successful working of the reaping machines now universally used on all but hilly land, permitting of the grain being reaped, winnowed, cleaned, and bagged on the harvest field, and removed into store ere the day is closed.

The high prices ruling for wheat caused the farmers to look more particularly to their grain crop for profit, and had the effect of reducing the breadth of land laid down for hay by 9,020 acres, the total area sown bring only 66,570 acres as compared with 75,590 acres the year before; and as the average yield was four cwt. less, viz., twenty-three cwt. as against twenty-seven cwt. per acre, the deficiency in the crop is very large, no less than 25,637 tons; the total quantity grown being 76,656 tons as against 102,293 tons in 1863-4, showing a falling off of one-fourth in the supply of this description of fodder.

There were 12,585 acres of barley sown, or 1,395 acres less; the quantity reaped being 207,022 bushels, or 46,979 bushels less; the average yield per acre being as low as sixteen bushels twenty-two lbs., or one bushel thirty-six lbs. under the yield of the previous season. The yield of oats was still worse, only fifteen bushels to the acre—being four bushels five lbs. below that of 1863-4; the quantity grown was nearly the same in both seasons, 75,135 bushels—the area sown, however, having increased from 3,923 acres to 5,093 acres.

An addition of 104 acres appears in the breadth of land under subsidiary crops, the items being as follows:—For green forage, wheat, &c., 812 acres; maize, forty acres; sorghum, 130 acres; lucerne, 856 acres; and permanent artificial grasses, 841 acres; and 222 acres of minor crops, including among others, mangol wurzel, rye, peas, tobacco, hops, and flax—all reported as succeeding favorably on the small scale attempted.

Fallow land is returned as 94,777 acres, or 15,400 acres less—the augmented area under wheat having doubtless fully taxed the energies of the farmers.

One-fifth more land was planted with potatoes; but the season proving very unfavorable, the quantity dug only exceeded that of the previous year by 224 tons. 2,963 acres were sown, yielding 6,493 tons, or 44cwt. to the acre—being 11cwt. below last season's average.

Garden land and orchards are returned as covering 5,675 acres—showing an increase of 189 acres. There is no way of obtaining any information as to the quantity of produce derived from the labor bestowed on this large area of ground; but greater attention is noted as being paid to the production of preserved and dried fruits, in which articles an important trade has been developed, both for the home market and for exportation.

The collection of articles of native produce—as bark, honey, beeswax, gum, &c.—forms a profitable occupation to the families of many small farmers, the total money value being considerable. In this direction, and also in the increased production of dairy articles of a superior quality, much improvement is apparent.

One-tenth more land has been planted with vines—making the total area of our vineyards to be 6,364 acres. Nine years ago, they covered only 753 acres. During the past five years the area has doubled. Up to last season, the proportion of bearing vines to those not yet productive was nearly equal; the present returns show 4,596,009 vines in bearing to 2,831,971 unproductive.

Only

Only a short period has to elapse before the whole of the extensive vineyards planted during the past few years will be in full bearing; so that the annual production of wine will be rapidly augmented. Already the figures are high, for the vintage of the present season cannot be estimated at less than 1,000,000 gallons. That of last year, for which the returns are given, yielded 798,647 gallons, or 192,282 gallons more than its predecessor. It is important to notice that the quantity of wine now made is more than double that produced three years ago. The home consumption is doubtless large; but it would be satisfactory to find a demand in a foreign market, which at present has not been the case—the exports of the year amounting to 20,674 gallons only, or 7,031 gallons less than in 1863.

The live stock returns show an additional number of horses and sheep, but a large reduction in the number of cattle. Owing to the protracted drought in the Far North, the police were unable to travel to collect the returns as usual; so that in two districts, the country north of Wilpena, the figures inserted in the accompanying tables are those given in February, 1864, to which attention is called in a foot-note.

The number of horses is returned at 62,899 or 3,891 more than last year. 643 horses, valued at £10,955, were exported during the twelve months. As showing the importance of this trade, it may be stated that during the past five years 3,224 horses have been shipped, chiefly to India, of a total declared value of £69,748 sterling.

The total number of sheep depastured was 4,106,230, or 214,588 additional—showing an increase of only five and a-half per cent., as compared with an increase in the previous season of thirteen and a-third per cent., and of twelve and a-half per cent. the year before. During the twelve months, 186,526 sheep were exported overland to the neighboring Colonies in excess of the imports, or 21,259 more than in 1863. The number travelling over the border, during the first quarter of the current year, was 14,345, as compared with 59,029 during same period last year. Two-thirds of the whole number of sheep are depastured within the limits of the proclaimed Counties.

The continued diminution in the number of cattle calls for serious attention. In each of the past seven years the returns show a decrease on the numbers of its predecessor, until the number now given is one-third less than the number returned in 1857. Then we depastured 310,460 head, now only 204,892 head. The falling off during the past season, as shown in the returns, is 21,274; but, owing to the state of the Far North, it is probable that the decrease is actually much greater, for, as the police state with regard both to cattle and sheep in that district, “it is impossible to estimate the number that will survive the season.” Whatever the cause, it is plain that the number of cattle has diminished gradually and continually to an alarming extent during the past seven years.

In closing a Report in which there are few subjects for congratulation, it would lead to a wrong impression did I omit to state that the agriculturists of this Province, whose energies and industry are shown to have been exerted to a remarkable degree, have as a body, met with substantial reward. The augmented value of all descriptions of produce, principally owing to an increased foreign demand, has more than counterbalanced the deficiency in production; and it is satisfactory to know that, having passed through an ordeal of no ordinary kind, the prosperity of this class of the community is not only unimpaired, but positively enhanced.

I have the honor to be, Sir,

Your most obedient humble servant,

J. BOOTHBY,

Government Statist.

TABLE I.—ABSTRACT showing the AREA of each COUNTY and PASTORAL DISTRICT, the total COUNTRY and SUBURBAN LANDS SOLD, the extent ENCLOSED, CULTIVATED, ENCLOSED but not CULTIVATED, and the NUMBER and DESCRIPTION of LIVE STOCK in SOUTH AUSTRALIA, for the Year ended 31st March, 1865.

Districts.	Area in square miles.	Area in Acres.	Purchased Land to 31st December, 1864.	Extent of Land held by Freeholders.	Land enclosed.	Land under cultivation.	Enclosed, but not cultivated.	Live Stock.						
								Horses.	Horned Cattle.	Sheep.	Lambs.	Goats.	Pigs.	Poultry.
